

Romania aims to have at least 2.5 GW of battery energy storage systems (BESS) in operation by next year and to surpass 5 GW of capacity by 2026 under a plan that is seen to help it cope with high energy prices.

In its first, the Romanian government has allocated EU funds for two major battery energy storage projects via its National Recovery and Resilience Plan. A utility-scale solar-plus-storage site in the country's northwest has flipped the switch.

A subsidiary of Monsson Group has submitted a proposal for a major battery energy storage project in Romania, seeking an environmental permit for a facility with a capacity of just over 2 GWh. The proposed location for the project is near Constanta, one of Romania's key regions for renewable energy development, especially wind power.

The developer has 5 GW of wind and solar power projects in the pipeline in Romania. It provides turnkey services for designing, developing, constructing and operating renewable energy and storage projects. Prime ...

The solution, known as BESS (Battery Energy Storage System), has a total initial capacity of 2.7 MWh of energy storage and a power of 2 MW. It includes a Power Conversion System that ...

A subsidiary of Monsson Group submitted a battery storage project of just over 2 GWh in capacity for an environmental permit in Romania. The location is near Constanta. According to the latest data, there is only 158 MWh in operation in the entire country.

In its first, the Romanian government has allocated EU funds for two major battery energy storage projects via its National Recovery and Resilience Plan. A utility-scale solar-plus-storage site in the country's ...

The project attempts to assess the current technical potential, regulatory framework, and estimated investment needs for commercially mature energy storage facilities in Romania, while also analysing the potential of different storage technologies, considering the domestic context.

The facility is part of the first hybrid photovoltaic-wind-battery project installed within an operational wind farm of 50 MW. The storage unit has an installed capacity of 24...

As the Romanian Ministry of Energy takes steps to encourage investments in standalone battery energy storage systems (BESS) through support schemes and an improved tariff regime, one regulatory challenge seems to have caught both investors and local authorities off-guard: a zonal urban plan (PUZ) is still necessary for developing standalone ...
