The A89333 is a 3-phase, sensorless and brushless DC (BLDC) motor controller. A field-oriented control (FOC) algorithm is fully integrated to achieve the best efficiency and acoustic noise performance. The device also optimizes the motor startup performance in stationary condition, as well as forward and reverse windmill condition.

Ian resolved this by choosing Victron Quattro 8kVA Inverter Chargers which have a peak power capability of up to 15kVA for short bursts of time and can be configured for three-phase supply. This is the system that Ian designed: 30 x 325 watt Q-Cell solar PV modules (9.75 kWp) 3 x 8 kVA Victron Quattro inverter/chargers

A three-phase power supply delivers power at a steady, constant rate. Comparing single-phase vs. three-phase power, three-phase power supplies are more efficient. A three-phase power supply can transmit three times as much power as a single-phase power supply, while only needing one additional wire (that is, three wires instead of two).
