The largest energy storage battery system will provide energy storage to transfer the generated electricity to users when there is a shortage in the electricity system. The battery system includes six battery containers, three inverter/transformer container and one distribution point container, providing a total electric capacity of up to 20 MWh.

It comes as the Baltic states - Latvia, Lithuania and Estonia - prepare to disconnect from the electricity system of Russia and synchronise with the European electricity system in 2025. The states will therefore need to be ...

Germany-based Rolls-Royce has been awarded a contract to supply two large-scale battery energy storage systems to Augstsprieguma tīkls (AST), Latvia's transmission system operator, with a ...

Latvia has taken a significant step towards a greener future with the commissioning of its first utility-scale battery energy storage system (BESS). The 10MW/20MWh BESS, located in Targale, Ventspils region, is integrated with the 58.8MW Targale Wind Park.

It comes as the Baltic states - Latvia, Lithuania and Estonia - prepare to disconnect from the electricity system of Russia and synchronise with the European electricity system in 2025. The states will therefore need to be able to independently regulate their grids' system frequency, with BESS projects set to play a huge role by providing ...

Rolls-Royce has received an order from the Latvian transmission system operator Augstsprieguma tīkls (AST) to supply a large-scale mtu battery storage system to secure the Latvian power grid. Together with the other Baltic states, the country will synchronize its energy supply system with the continental European power grid in 2025.

Rolls-Royce will supply an mtu EnergyPack QG large-scale battery storage system with an output of 80 MW and a storage capacity of 160 MWh. This makes the system one of the largest battery storage systems in the EU.
