

For example, here's how you would find the daily output of a 5 kW solar system getting 4.5 peak sunlight hours per day equals: 5 kW solar system x 4.5 sunlight hours per day x 0.75 performance rating = 16.875 kWh per day. In many cases, that's more than enough to power essential electrical systems and recharge a 10 kW battery to use overnight.

With 1,000 watts equal to 1 kW, a 7kW installation would need 27 "standard" panels (7000 watts divided by 265 watts = 26.4, rounded up to 27 panels). If your roof is very small and you don't have space for 27 panels, installing high-efficiency panels is certainly an option, though they'll cost more than the standard panels.
