

Is ATS a sustainable solution?

It is a sustainable(99% circular) and cost-effective solution that produces electricity directly from waste heat. For 200 years we've used turbines. ATS' solid-state solution represents a paradigm shift in how heat can be managed. The impact potential is gigatonnes, spanning industries and the world.

What is ATS' solid-state solution?

ATS' solid-state solution represents a paradigm shift in how heat can be managed. The impact potential is gigatonnes, spanning industries and the world. We are radically redefining what's possible to fix the climate. On average, 60% of the energy to power the world's industrial plants (cement, steel, chemicals) is lost as waste heat.

Why do we need an ATS cartridge?

Industry and the world needs a solution to this problem to save costs and the climate. The ATS Cartridge produces electricity directly from heat with no moving parts. The old technology utilizes highly complex turbines and hazardous chemicals. From 150 - 500+°C and radiant/exothermic heat

When was the last funding round for Advanced Thermovoltaic Systems? Advanced Thermovoltaic Systems closed its last funding round on Apr 22, 2022 from a Seed round. Who are Advanced Thermovoltaic Systems' competitors? Alternatives and possible competitors to Advanced Thermovoltaic Systems may include Enphase Energy, Thermondo, and Aquion Energy.

Advanced Thermovoltaic Systems (ATS) has developed a straightforward, safe, and scalable technology to capture waste heat and convert it into electricity, providing a transformative solution for heavy industries such as cement and steel production. These industries operate at extremely high temperatures, producing significant amounts of waste ...

Advanced Thermovoltaic Systems (ATS) integrates cutting-edge security measures into our modular solid-state systems. From robust controls design to cyber security certification, tamper monitoring ...

ATS is the world's first and only solution for industrial waste heat--without a single moving part. It is a sustainable (99% circular) and cost-effective solution that produces electricity directly from waste heat.

Advanced Thermovoltaic Systems (ATS) has developed a simple, safe, and scalable technology to capture waste heat and convert it into electricity, offering a game-changing solution for heavy industries like cement and steel production.

ATS is the world's first and only solution for industrial waste heat--without a single moving part. It is a

sustainable (99% circular) and cost-effective solution that produces electricity directly from ...

Canadian-based Advanced Thermovoltaic Systems (ATS) was recognised for its technology to capture and convert industrial waste heat into sustainable electricity without the need for moving parts. It won the "Fix Our Climate" Prize at this year's Earthshot Awards Ceremony, held last week in Cape Town, South Africa.

Advanced Thermovoltaic Systems (ATS) is revolutionizing the way industries manage waste heat, providing the world's first and only solid-state solution that converts industrial waste heat into clean, sustainable electricity without the need for turbines or moving parts. ATS offers a 99% circular, scalable, cost-effective, and revenue-positive ...

Advanced Thermovoltaic Systems (<https://apo-opa /48EySP6>), USA Nominated by: Herbert Smith Freehills LLP. Advanced Thermovoltaic Systems (ATS) has developed a simple, safe and scalable ...

Advanced Thermovoltaic Systems. Advanced Thermovoltaic Systems was the winner in the "Fix Our Climate" category, which aims to reduce CO2 emissions. ... ATS" project was an efficient and scalable heat capture device to convert excess heat from manufacturing into usable electricity. Initially, they worked on advancing solar energy, but ...

One of the 20 winners was the Advanced Thermovoltaic Systems (ATS) team, including Jake Perez, a RASEI alum. The ATS team was awarded the distinguished 2024 Earthshot "Fix Our Climate" prize for their transformative efforts against climate change. Chosen from 5,342 nominations across 141 countries, this prestigious award was recently ...

Founded in 2008, Advanced Thermovoltaic Systems, LLC (ATS) is developing a thermovoltaic device also known as a thermoelectric generator (TEG) to convert heat directly into electrical energy through the Seebeck effect. After more than 12 years of research, design, and development yield, ATS has patented its device.

One of the 20 winners was the Advanced Thermovoltaic Systems (ATS) team, including Jake Perez, a RASEI alum. The ATS team was awarded the distinguished 2024 Earthshot "Fix Our Climate" prize for their transformative efforts against climate change.

"At ATS, we are proud to lead the way in converting this waste into clean, usable electricity. Winning the 2024 Earthshot Prize underscores the transformative potential of our technology. Tonight is a key moment for us as we focus on scaling up production in larger manufacturing facilities," Kelly Adams, CEO, Advanced Thermovoltaic Systems.

Initially investigating advanced materials the company could use for solar panels, the Advanced Thermovoltaic Systems (ATS) team realised that its panels could generate electricity without light, only requiring waste ambient heat.

Advanced Thermovoltaic Systems (ATS) is revolutionizing the way industries manage waste heat, providing the world's first and only solid-state solution that converts industrial waste heat into clean, sustainable electricity without the need for turbines or moving parts.
