

Is alsym energy flammable?

Alsym(TM) Energy has developed a high-performance, inherently non-flammable, non-toxic, non-lithium battery chemistry. It's a low-cost solution that supports a wide range of discharge durations.

Could alsym be a new energy storage platform?

A new platform for energy storage Although the batteries don't quite reach the energy density of lithium-ion batteries, Varanasi says Alsym is first among alternative chemistries at the system-level. He says 20-foot containers of Alsym's batteries can provide 1.7 megawatt hours of electricity.

Where are alsym batteries made?

Alsym has been manufacturing prototypes at a small facility in Woburn, Massachusetts for the last two years. Pictured is a view of the Alsym facility. Lithium-ion batteries are the workhorses of home electronics and are powering an electric revolution in transportation. But they are not suitable for every application.

What are alsym batteries made of?

Although the full makeup of Alsym's battery is still under wraps as the company waits to be granted patents, one of Alsym's electrodes is made mostly of manganese oxide while the other is primarily made of a metal oxide. The electrolyte is primarily water. There are several advantages to Alsym's new battery chemistry.

What are the advantages of alsym's new battery chemistry?

There are several advantages to Alsym's new battery chemistry. Because the battery is inherently safer and more sustainable than lithium-ion, the company doesn't need the same safety protections or cooling equipment, and it can pack its batteries close to each other without fear of fires or explosions.

What is alsym green battery chemistry?

Alsym Green's metal-oxide battery chemistry leverages a mechanism analogous to the one found in lithium-ion batteries, with the working ion shuttling between the anode and cathode. Alsym Green cells are also designed similarly to lithium-ion, with a cathode, anode, separator, and liquid electrolyte.

According to Alsym, the battery will be suitable for applications requiring discharge durations of between 4 and 110 hours and can be fully charged in just 4 hours. The company describes this versatility to go from short to long-duration and beyond to multi-day storage as characteristic of the battery being so-called "wide-duration storage".

Alsym(TM) Energy has developed a high-performance, inherently non-flammable, non-toxic, non-lithium battery chemistry. It's a low-cost solution that supports a wide range of discharge ...

Alsym Energy, which develops batteries that provide an alternative to lithium and cobalt, calls the successful financing indicative of growing interest in high-performance, inexpensive non-flammable battery technologies.

By using readily available, inherently non-toxic and non-flammable battery materials, Alsym is working to deliver wide-duration storage with performance comparable to lithium ion at a much lower cost, helping to ...

Now Alsym Energy has developed a nonflammable, nontoxic alternative to lithium-ion batteries to help renewables like wind and solar bridge the gap in a broader range of sectors. The company's electrodes use relatively stable, abundant materials, and its electrolyte is primarily water with some nontoxic add-ons.

The company has developed a technology free from cobalt, nickel, and lithium that it claims is not derived from or based on improving anything else available on the market today. According to Alsym, the battery will be suitable for applications requiring discharge durations of between 4 and 110 hours and can be fully charged in just 4 hours.

Alsym Energy, which develops batteries that provide an alternative to lithium and cobalt, calls the successful financing indicative of growing interest in high-performance, inexpensive non-flammable battery ...

Now Alsym Energy has developed a nonflammable, nontoxic alternative to lithium-ion batteries to help renewables like wind and solar bridge the gap in a broader range of sectors. The company's electrodes use ...

Alsym Energy's high-performance, inherently non-flammable, and non-toxic batteries are aimed at replacing lithium cells. Claimed to be a low-cost solution, Alsym's batteries support a...

According to Alsym, the battery will be suitable for applications requiring discharge durations of between 4 and 110 hours and can be fully charged in just 4 hours. The company describes this versatility to go from ...

Alsym(TM) Energy has developed a high-performance, inherently non-flammable, non-toxic, non-lithium battery chemistry. It's a low-cost solution that supports a wide range of discharge durations. With system-level energy densities approaching lithium-ion and the ability to operate at elevated temperatures, Alsym Green is a single solution for ...

Alsym Green is the highest-performing non-lithium battery for stationary storage. It offers energy density that is 2x to 10x higher than competing technologies, stores up to 1.7 MWh of energy in a 20' BESS container, provides fast charge (4 hours) and flexible discharge (2 to 110 hours), and has 92% round-trip efficiency.

By using readily available, inherently non-toxic and non-flammable battery materials, Alsym is working to deliver wide-duration storage with performance comparable to lithium ion at a much lower cost, helping to speed the pace of decarbonisation globally.
