

Can Celgard 3501 be used as a separator?

Tsehay et al. used Celgard 3501 impregnated with a commercial anion exchange ionomer (Fumion) to modify the support membrane to use as a separator in a Zn-air battery. ...

How many layers of Celgard 3501 separators are there?

We considered 32 layers of Celgard 3501 separators with a thickness of 25  $\mu\text{m}$  and a diameter of 1 cm per layer, as reported in and experimentally evaluated in . This Celgard 3501 separator is a monolayer micro-porous polypropylene (semicrystalline, 40 % crystallinity) membrane and is produced through a dry stretch process .

Does Celgard 3501 have a porous structure?

... no increase in thickness was noted by micrometer and SEM analysis, indicating the complete impregnation/penetration of the polymer solution onto the porous structure of the Celgard 3501 substrate . Indeed, the SEM cross-section image shows that the pores are partially filled ( Figure 4 f).

Which ionomer is used on Celgard 3501?

Tsehay et al. coated ion-selective ionomer containing modified poly (phenylene oxide) (PPO) and N-spirocyclic quaternary ammonium monomer on Celgard 3501 and crosslinked via UV irradiation (PPO-3.45+3501). The results showed that the PPO-3.45+3501-based ... ..

Model: Celgard 3501. 25 $\mu\text{m}$  Microporous Monolayer Membrane PP Separator Surfactant-Coated. Primary Application: Aqueous Electrolyte Battery Systems. Product Features: 1. Surfactant coated for rapid wetting. 2. Low electrical ...

Zinc has the potential for widespread use as an environmentally friendly and cost-effective anode material

pending the resolution of rechargeability issues caused by active material loss and shape change. Here, a self-assembled Nafion-coated Celgard 3501 (NC-Celgard) separator is shown to enable unprecedented cycle life of a Zn anode in alkaline electrolyte at high depth-of ...

Celgard is a global leader in the development and production of high-performance membrane technology. Celgard's solvent-free manufacturing process results in chemically and thermally stable products that are used in a broad range of ...

On the other hand, for Nafion 212 and Celgard 3501 cells, after the first cycle, we noted rapid capacity fade for both: Nafion 212 retained only 43% of its initial capacity after 34 cycles over 5.7 days (~1.8% loss per cycle) with Coulombic efficiencies steady at ~95%, and Celgard 3501 retained only 46% over 13 cycles over 1.6 days (~3.9% ...

SEM images of b) Celgard 3501 as received and c) NC-Celgard. d) FTIR spectrum for unmodified Celgard 3501 and NC-Celgard with peaks at 1150 and 1204 cm<sup>-1</sup> indicating C-F bond stretching. e) Cross ...
