

The SeaQ Energy Storage System will be used as a spinning reserve in place of generator sets, enabling the vessel to run on fewer engines with more optimal load while still maintaining the requirement for redundancy. An added benefit with batteries is peak shaving that takes the strain off the engines during big load variations by levelling the ...

Vard Electro's SeaQ Energy Storage System will enable Siem Offshore's subsea construction vessel to operate in fully electric mode with zero emissions while maneuvering in harbor or other restricted areas and will deliver estimated fuel savings of ...

VARD has developed the SeaQ Energy Storage System (SeaQ ESS) for storing excess energy on board a vessel, or energy from shore connections, for later use. The SeaQ ESS enables ships to use excess energy ...

Vard Electro has secured an order with REM to deliver a complete SeaQ Energy Storage System package for a vessel retrofit as the shipowner is proactively upgrading its fleet with hybrid power in pursuit of greener and safer operations with lower fuel ...

VARD has developed the SeaQ Energy Storage System (SeaQ ESS) for storing excess energy on board a vessel, or energy from shore connections, for later use. The SeaQ ESS enables ships to use excess energy alongside their conventional power supply, optimising fuel performance.

The supply package for the Siem Offshore subsea construction vessel will consist of a Vard Electro SeaQ Energy Storage System (ESS), two battery packs and a DC link. Installation is scheduled for early 2022 ahead of ...

The newly signed contract covers a SeaQ package that includes an energy storage system, drives, energy management system, and power management system, which will be installed onboard the Platform Supply ...

The newly signed contract covers a SeaQ package that includes an energy storage system, drives, energy management system, and power management system, which will be installed onboard the Platform Supply Vessel "REM Commander" by the end of the year.

The newly signed contract covers Vard Electro's SeaQ Energy Storage System (ESS) with two battery packs

and a DC link, which will be installed in the first quarter of 2022 on one of Siem Offshore's subsea construction vessels lined up for work in the wind sector.

Vard Electro's SeaQ Energy Storage System will enable Siem Offshore's subsea construction vessel to operate in fully electric mode with zero emissions while maneuvering in harbor or other restricted areas and will ...
