In general, solar is a good option in OK that will save homeowners money, but it's not suitable for everyone. In this article, you'll learn about the metrics you can use to determine if solar panels are right for your home.

Are solar panels a good option?

Installing solar panels can reduce your impact on the environment and potentially your electricity cost. There's a lot to think about when determining if solar panels are a good option for you. Before you make a decision, consider some of the facts and read our helpful guide.

Should I buy a solar panel?

Before you make a decision, consider some of the facts and read our helpful guide. Typically, solar panels supplement your electric service and cannot operate independently of the electric grid unless it's specifically designed to provide back-up power.

Should you install solar in OK?

As such, there are few incentives for installing solar in OK, as wind helps the state reach its Renewable Portfolio Standard (RPS) goals. With that being said, home solar installations have increased immensely in popularity over the past decade, with 2021 being the best year by far for solar adoption.

Is Oklahoma a good place to install solar panels?

Oklahoma receives an average of 234 sunny days per year, which is well above the national average of 205 days. The lack of cloudy weather generally makes OK a better place than most for solar panels.

Why are solar panels rated that way?

Solar panels are rated that way because that's how much your typical shingled roof is rated to withstand, although our panels can typically handle much more. We had 39 instances in 2022 where we partnered with different roofers to replace a roof because of hail, but the solar panels were 100% in tact and were able to be re-installed.
