

Automatic welding of solar street light bracket

What is a LED based solar street lighting system?

A LED based solar street lighting system consists of a Solar PV Module, Solar charge controller, battery, and LED based luminaires, all suitably mounted on a pole. The battery is charged by electricity generated through the PV module during day time and the luminaires provide light from dusk to dawn.

How much weight can a solar light mounting bracket hold?

Install light poles with a minimum size of 1.5 inches and a maximum size of 3.5 inches. Please note that the thickness is 0.5mm. The solar mounting bracket can hold up to 150 pounds. The solar light mounting bracket is used in outdoor lighting, we do not recommend you install other products more than 150 pounds. DURABLE MATERIAL AND IS TO INSTALL.

What components are used in a solar street light system?

In most typical solar street light systems, the following components are used: the solar panel assembly, which is made up of the solar panel, mounting bracket, and hardware.

How to install solar panels & brackets?

Assembly of solar panels and brackets: Align the installation holes of the solar panels and brackets and tighten the screws. Pre-assembly of batteries: Place the batteries in the battery box, install the sealing ring, and thread the battery wires from the top cover wire outlet. Cover the top cover, align it with the holes, and tighten the screws.
