

Three solar power plant projects are in development in Alberta, Canada, which will add nearly 300MW of battery storage to the province's grid. Alberta's first grid-scale battery project, Windcharger, a 10MW/20MWh battery energy storage system (BESS) at a wind farm, was only brought online in late 2020 by developer TransAlta Renewables.

One of the identically-sized 20MW BESS projects in developer Enfinite's eReserve portfolio in Alberta. Image: Enfinite. A joint venture of UK-based Aura Power and Germany's ib vogt, along with the Canadian development arm of France's Neoen, have recently submitted applications with the Alberta Utilities Commission (AUC) to construct three projects ...

Belize Electricity Limited (BEL) is currently preparing the grounds to install 10 MW of battery storage in San Pedro Ambergris Caye. Demand for electricity in San Pedro is growing faster than expected, peaking at a record high of 16.4 MW in 2023.

The project's primary implementing agency is Belize Electricity Limited, the country's main utility and network operator. It comes shortly after nearby Honduras progressed the reform of its electricity market to enable the deployment of energy storage at scale on its grid. Wärtsilä completes generators-plus-BESS on US Virgin Islands

We provide clients with customized energy storage & back-up solutions. Energy storage & backup will help our customers - from homeowners and small business owners to industrial manufacturers and critical infrastructure facilities - to be more secure in the face of our changing climate.

The Ministry of Finance, Economic Development and Investment has announced a call for expressions of interest (EOI) from energy storage experts and consultants to support the groundbreaking ...

The new system will make it possible for Turtle Island Beach Resort to operate entirely on renewable energy sources and reduce its carbon footprint significantly. Located off the coast of Belize near San Pedro, the resort will switch from a diesel backup generation to a battery-powered clean energy system.

10 MW of battery storage system, which is being developed at a BEL owned property behind the BEL Substation on Pescador Drive in San Pedro, is the first phase of a larger plan to deploy 40 MW of battery storage across the country.

10 MW of battery storage system, which is being developed at a BEL owned property behind the BEL Substation on Pescador Drive in San Pedro, is the first phase of a larger plan to deploy ...

The purpose of the session is to present the Energy Storage Roadmap that sets out a plan to facilitate integration of energy storage in Alberta. We will also provide an update on the Flexibility Roadmap that provides a sustainable process to assess flexibility needs and progresses mechanisms to ensure sufficient system flexibility.

A battery energy storage system (BESS) facility of 40 MW capacity is sought under the project to enable seamless integration of clean energy onto the national electricity grid to provide uninterrupted supply of power to the country's residents.

Belize Government Requested WB Support for its First Energy Storage Investment Project 5 o Project Development Objectives: To enable integration of new renewable energy generation and enhance the electricity system resilience against extreme climates by strengthening the national transmission infrastructure.

The government of Alberta, Canada, has announced that CA\$25 million (US\$20.1 million) in financial support has been offered for solar-plus-storage and pumped hydro energy storage as part of a CA\$176 million package that will also give funding to oil and gas industry projects.

Various large-scale solar-and-storage projects are in development in Alberta, notably through developer Westbridge, which has a growing pipeline seeking interconnection approvals. Meanwhile power company TransAlta recently acquired a 50% interest in a 320MW pumped hydro energy storage (PHES) plant in development.

Westbridge's four Alberta projects are now all at Stage 2 or Stage 3 of the Alberta Energy System Operator (AESO) grid connection process, which has four stages in total. Alberta only got its first grid-scale battery storage system in 2020, a few months after the province's first solar-plus-storage project was granted development approval.
