

This autumn, the Battery Energy Storage System (BESS) will be connected to the Latvian electricity transmission system, contributing. The total project investments amount to EUR7 million. "This is a historic moment in Latvia"s modern energy sector.

The states will therefore need to be able to independently regulate their grids" system frequency, with BESS projects set to play a huge role by providing much of that balancing service. The BESS will provide backup at ...

Latvia has taken a significant step towards a greener future with the commissioning of its first utility-scale battery energy storage system (BESS). The 10MW/20MWh BESS, located in Targale, Ventspils region, is integrated with the 58.8MW Targale Wind Park.

Niam and Evecon will deploy 84MW of solar power and 26MW of energy storage across 11 project sites in Latvia. Image: Niam Infrastructure. News from the Nordics and the Baltics, with BESS projects launched in Sweden, Denmark and Latvia by Centrica, Nordic Solar and Niam Infrastructure and Evecon.

Bids have been received by Latvia"s grid operator AST for an 80MW/160MWh BESS project while developers Corsica Sole and Everon will build a 200MW system in Estonia, as the Baltic region prepares to decouple from Russia"s electricity system in 2025.

The states will therefore need to be able to independently regulate their grids" system frequency, with BESS projects set to play a huge role by providing much of that balancing service. The BESS will provide backup at high-speed and automatically activate frequency regulation reserves, and at a much lower cost than conventional power plants ...
