What is a hybrid solar inverter?

Like regular string solar inverters, hybrid inverters convert solar DC power from strings of solar panels to AC (alternating current) power used to power your home. However, unlike solar inverters, excess solar energy is used to charge a connected battery system or exported to the electricity grid.

Can a hybrid solar inverter operate without being connected to the grid?

Yes, a hybrid inverter can operate without being connected to the grid. This allows for an off-grid solar system setup, where the energy produced by solar panels is stored in batteries and used directly. The hybrid solar inverter strikes a balance between solar power and grid energy, offering uninterrupted power and versatility.
