

I have 3 Seplos mason kits running V3, 200A bms WITHOUT an active balancer. I have around 60 cycles on my batteries and all of them have cells still within 10mV deviation at full charge. The passive balancer does a great job.

Each time the battery system changes status, BMS will save the data information, which including warning, protection triggering and releasing data. BMS can also save the data information of a certain period of time by setting start time, end time and time interval.

Upto 300 historical data can be recorded and stored. And all the data
