

What are the policy guidelines for the energy sector in Bolivia?

The Bolivian government has established the following policy guidelines for the energy sector: energy sovereignty, energy security, energy universalization, energy efficiency, industrialization, energy integration, and strengthening of the energy sector (MHE, 2014).

What type of energy is used in Bolivia?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Bolivia: How much of the country's energy comes from nuclear power?

What is Bolivia's energy mix?

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

Who is responsible for alternative energy in Bolivia?

This brief benefited from valuable comments by the following reviewer: Raúl Villarroel Barrientos, Responsible for Alternative Energy, Ministry for Hydrocarbons and Energy, Bolivia. This publication and the material featured herein are provided "as is", for informational purposes.

Who regulates the energy industry in Bolivia?

The AJAM (Autoridad Jurisdiccional Administrativa Minera) is responsible for permitting and exploration licenses. The main regulatory bodies in Bolivia are: AE (Authority of Fiscalization and Social Control of Energy), the Vice Ministry of Electricity and Alternative Energy, and the Vice Ministry of High Energy Technologies.

Does Bolivia have a long-term energy plan?

As previously mentioned, the Bolivian government does not provide any long-term energy planning study, however, the UNFCCC (2015b) states that RE will compose 81% of electricity generation by 2030. Bolivia's scenario for 2027 according to MHE (2009) states that biomass sources will comprise 8% of total final energy demand.

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

Annual generation per unit of installed PV capacity (MWh/kWp) 9.5 tC/ha/yr Solar PV: Solar resource

potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a ...

With the original overall goal of promoting renewable energy within Bolivia, PEERR was extended in 2017 to include the optimisation of energy efficiency. PEERR is made up of four components, of which NIRAS is contracted to carry out two, focusing on implementing energy efficiency measures, capacity development, and training and knowledge ...

Bolivia is making efforts in its electric sector, such as increasing the share of renewable energy and decommissioning inefficient power plants. However, these efforts remain limited when compared to the total national energy demand. Currently, more than 80% of internal energy consumption in Bolivia is of fossil origin.

Bolivia's next largest solar plant is located in Uyuni, Potosí; in the southwest of the country with 60MW capacity and others of smaller capacity, around 5MW, are installed in Pando and Beni in the north and Tarija in the south.

Bolivia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

2020 and 2050, similar to 7 % of the current national GDP of Bolivia. These results highlight the significant challenge of transitioning Bolivia's energy sector. Keywords: Energy modelling, ...

With the original overall goal of promoting renewable energy within Bolivia, PEERR was extended in 2017 to include the optimisation of energy efficiency. PEERR is made up of four components, of which NIRAS is contracted to carry ...

In 2011, Bolivia defined the Policies for Renewable Energy in the Electric Sector, including action through four programmes: (1) deployment of renewable energy, (2) rural electrification, (3) development of the regulatory framework; and (4) research and development (R&D). The development of the

From strictly economic terms, though, BPS-3 suggests that to achieve a fully RE system, smart energy policy initiatives are required to properly tax harmful GHG emissions and provide proper supportive incentives for the development of ...

2020 and 2050, similar to 7 % of the current national GDP of Bolivia. These results highlight the significant challenge of transitioning Bolivia's energy sector. Keywords: Energy modelling, Energy systems, Bolivia, Energy transition, GHG emissions, Energy policy, Carbon neutrality, OSeMOSYS, Dispa-SET 1. Introduction
