

Where is Bouvet Island?

Bouvet Island (/ˈbuːveɪ /BOO-vay; Norwegian: Bouvetøya [buˈvèːœY?]) is an uninhabited island and dependency of Norway. It is a protected nature reserve. It is a subantarctic volcanic island,situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge,and is the world's most remote island.

Does Bouvet Island have ice?

Ice covers about 94 percent of Bouvet Island year-round. Bouvet Island has little to offer. The most remote island in the world is fewer than 20 square miles in size,and it's almost entirely covered by a glacier. Long ago,it was an active volcano,but those fiery days have long since passed.

Does Bouvet Island have a top-level domain?

But here's the weird thing about Bouvet Island having its own top-level domain: It's uninhabited. It's always been uninhabited. Located in the southern Atlantic,the closest land to Bouvet Island is the coast of Antarctica,1,100 miles to the south.

How did Bouvet Island become a dependency?

The expedition carried out aerial photography of the island and was the first Antarctic expedition to use aircraft. : 64 The Dependency Act,passed by the Parliament of Norway on 27 February 1930,established Bouvet Island as a Norwegian dependency,along with Peter I Island and Queen Maud Land.

How did Bouvet Island get its name?

At that point, the island was given its current name of Bouvet Island ("Bouvetøya" in Norwegian). In 1930, following resolution of a dispute with the United Kingdom over claiming rights, it was declared a Norwegian dependency. In 1971, it was designated a nature reserve.

How far is Bouvet Island from Antarctica?

Bouvet Island is one of the most remote islands in the world. The closest land is Queen Maud Land of Antarctica,which is 1,700 km (1,100 mi)to the south,: 58 and Gough Island,1,845 km (1,146 mi) to the north.

Bouvet Island has little to offer. The most remote island in the world is fewer than 20 square miles in size, and it's almost entirely covered by a glacier. Long ago, it was an active volcano ...

The solitary ice-covered shield volcano of Bouvet Island is located just off the Southwest Indian Ridge, east of the triple junction between the African, South American, and Antarctic plates. This basaltic-to-rhyolitic island, also referred to as Bouvetoya, was discovered by and later named for Captain Lozier-Bouvet during his 1739 search for the "great southern continent." About 95% of ...
