

In the short term, at least, low prices are a boon for governments and companies looking to deploy solar modules. 2023 saw sustained low prices across the solar value chain from polysilicon...

From upstream polysilicon, wafers and cells, to downstream panel prices, OPIS Solar Weekly keeps you updated on price trends and forward prices. It is the first solar materials price report to use an assessment methodology that follows IOSCO requirements for fair and transparent pricing.

By stacking perovskite solar cells in tandem with others, researchers are nearing the record efficiency of single crystal silicon, the industry's commercial standard. Two-terminal (2T) devices layer the materials into a single cell; four-terminal (4T) devices stack together two electrically independent cells.

Improvements in technology and manufacturing have dropped the price of these cells some 88% in the past decade, according to a recent analysis by Lazard, a global financial analysis firm. That has prompted, over the same period, a more than 30-fold increase in solar energy deployment around the world to more than 30 billion watts, or 30 ...

The most recent iteration - published yesterday (24 August 2020) - shows that the government expects large-scale solar PV to be developed at a LCOE of ₹44/MWh in 2025 in its central cost scenario, a significant drop when compared to its 2016 forecast, which placed solar at ₹68/MWh.

From upstream polysilicon, wafers and cells, to downstream panel prices, OPIS Solar Weekly keeps you updated on price trends and forward prices. It is the first solar materials price report to use an assessment methodology that follows IOSCO requirements for fair and transparent ...

New Delhi: In a significant booster for India's efforts to create solar power capacity at an ambitious pace, the prices of Chinese solar modules have dropped to a historic low of \$0.196 per watt peak (wp). India imports around ...

Perovskite solar cells have shown remarkable efficiency in converting sunlight into electricity, but their mass production and long-term stability remain significant challenges.

The government has today (16 November) revealed that the administrative strike price for the latest Contracts for Difference round will be ₹61/MWh. This is a 30% increase from the technology's strike price in Auction Round 5 (AR5) which was set at ₹47/MWh.
