How have communities invested their local wind energy revenue?

This section of the "Land-Based Wind Energy Economic Development Guide" highlights some ways communities have invested their local wind energy revenue. School districts are often the beneficiary of revenue payments received by communities from wind energy projects.

How can wind power benefit local communities?

Moreover, wind power helps to address environmental issues such as reducing greenhouse gas emissions. Tehachapi, California, is a prime example of how wind energy can benefit local communities. The area has become a hub for wind power, with over 5,000 turbines producing around 4 gigawatts of electricity per year.

Can a wind energy project affect rural communities?

Rural communities can have limited temporary housing and might be burdened during the construction phase of a wind energy project when there is a high influx of workers, resulting in housing stock shortages.

Are tall towers a good idea for wind energy?

A common talking point for wind energy skeptics is that the tall towers are too much of an eyesore, especially against a natural landscape. Despite critics' best efforts, however, public opinion on wind and solar energy has remained positive, with around 75 percent of U.S. adults in support of expanding wind farms.

What role do developers and communities play in wind energy development?

Developers and communities play an important role in ensuring the economic viability of a wind energy project. This can be observed especially in the taxation of these developments. For owners/developers, tax considerations play a role in selecting a location for the wind energy project.

How can communities conduct research on wind energy projects?

Communities can also conduct additional research using the identified name of a wind energy project (e.g., the Laurel project example shown in Figure 5, which was created using a separate search engine [e.g., Google, Bing]) to identify the specific companies that are developing wind energy projects near their community.
