

Burkina Faso lazard leveled cost of storage

Does Lazard have a leveled cost of storage?

Source: Lazard estimates. (1) Given the operational parameters for the Transmission and Distribution use case (i.e., 25 cycles per year), certain leveled metrics are not comparable between this and other use cases presented in Lazard's Levelized Cost of Storage report.

What is Lazard's LCOS report?

Lazard's LCOS report analyzes the observed costs and revenue streams associated with commercially available energy storage technologies and provides an overview of illustrative project returns.

How does Lazard calculate capital cost units?

Lazard estimates. Assumed capital structure of 80% equity (with a 12% cost of equity) and 20% debt (with an 8% cost of debt). Capital cost units are the total investment divided by the storage equipment's energy capacity (kWh rating) and inverter rating (kW rating).

Why did Lazard exclude a transmission and distribution use case?

Lazard's Value Snapshot analysis intentionally excluded a Transmission and Distribution use case from its international analysis given the lack of substantive publicly available data for projects deployed for this use case. Source: Lazard and Roland Berger.

Lazard has published its second Levelized Cost of Storage Analysis ("LCOS 2.0"), 1 an in-depth study that compares the costs of various energy storage technologies for particular applications. 2
