

How much energy does Burundi use?

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of 382.70 million kilowatt hours(kWh) of electric energy per year. The country produces locally 69% of the electricity it consumes, with the rest imported from other countries.

How has private energy consumption changed in Burundi?

It is only in the last five years that private consumption has grown in real terms. Burundi's energy consumption relies to a great extent on biomass. Households are the main consumers of energy in the country, accounting for 94% of total consumption. Their needs are almost exclusively met by traditional biomass (99%).

What is Burundi's main energy source?

Its most important power source is hydroelectric power, representing 95% of total production. It also uses energy from other renewable (wind, solar, biomass, and geothermal) and coal power plants. Burundi has the world's lowest carbon footprint per capita at 0.027 tons per capita in CO₂ emissions as of 2019.

Which technology is most important for power generation in Burundi?

Hydropower is the most important technology for power generation in Burundi, representing 95% of the total national generation capacity. This energy is transported through elevated lines of average voltage and distributed to the customers by lines of low voltage. The levels of transport voltage in Burundi are 110 kV, 30 kV and 10 kV.

What is the most common off-grid electricity source in Burundi?

Go to Top Solar energy is the most common off-grid electricity source in Burundi, although the number of systems installed is very slow. With the global price dropping of solar technologies a small solar sector emerged in the recent years, that offer smaller systems for private households, businesses and public institutions.

How is energy transported in Burundi?

This energy is transported through elevated lines of average voltage and distributed to the customers by lines of low voltage. The levels of transport voltage in Burundi are 110 kV, 30 kV and 10 kV. Electrical energy production was 133 GWh in 1992 and 150 GWh in 1993.

Only 10% of the population has access to electricity in Burundi, a low rate compared to other countries of the East African Community. The Energy Strategy and Action Plan provides a strong platform for renewable energy development in the country.

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of

382.70 million kilowatt hours (kWh) of electric energy per year. The country produces locally 69% of the electricity it consumes, with the rest imported from other countries. Its most important power source is hydroelectric power, representing 95% of total pro...

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

At Burundi Energy Corporation (BEC), we are at the forefront of an energy transformation that will redefine Burundi's future. Our flagship initiative, the Burundi Energy Transformation Project, is a bold, multi-phase program that seeks to not only solve Burundi's energy challenges but also catalyze economic growth, enhance public safety ...

Burundi's energy consumption relies to a great extent on biomass. Households are the main consumers of energy in the country, accounting for 94% of total consumption. Their needs are almost exclusively met by traditional biomass (99%). Electricity (0.3%), and oil products (0.4%) play an insignificant role.

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of 382.70 million kilowatt hours (kWh) of electric energy per year. [1] The country produces locally 69% of the electricity it consumes, with the rest imported from other countries. [1]

Support inclusive, green, sustainable, and job-creating growth in Burundi through access to sustainable energy services. Deep transformation of the Burundian economy and the gradual industrialization of the most promising sectors (first and foremost the agricultural sector).

Burundi: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.
