

The design of a carbonator reactor for a specific Calcium Looping-Concentrated Solar Power application has not been addressed yet in detail in literature. In this work, a ...

During power generation, the exothermic reaction of CaO is utilized in the carbonation reactor to convert stored chemical energy into heat energy for release, heating the circulating water for ...

The capability of calcium looping to efficiently store solar energy fluctuation and feed a power unit with higher energy density makes this option an optimal candidate for the decarbonization of ...

Wind power plays a leading role in driving demand growth due to a combination of large-scale capacity additions and higher mineral intensity (especially with growing contributions from ...

The Ca 2s and N 1s emission peaks confirm the existence of CaCO₃ mineral and peptides. The C 1s spectra in (d) was self-fitted with individual peaks assigned for the carbon atoms from ...

The commercial expansion of renewable energy technologies is an urgent need to limit global warming to "well below" 2.0 °C (by 2100) and pursue 1.5 °C above pre-industrial ...

Concentrated solar power (CSP) cannot stand as a sustainable solution for power production without daily interruption unless solar energy is stored for the night hours. Solar ...

Organic/inorganic metal halide perovskites attract substantial attention as key materials for next-generation photovoltaic technologies due to their potential for low cost, high ...

Due to their high efficiency and low cost, perovskite-based solar cells are a scientific breakthrough in the field of PV power generation. Perovskite is a naturally occurring mineral of calcium ...

Solar energy is one of the fastest-growing sources of renewable energy, and the demand for solar panels is expected to increase dramatically in the coming years. According to the International Energy Agency, solar power ...

In recent years, the functional properties of peptides derived from food proteins have attracted considerable interest. Among them, bioactive peptides that can effectively bind ...
