

As identified in the 2019 IEA report Nuclear Power in a Clean Energy System and confirmed in this report, life extension of existing nuclear power plants can be a highly cost effective ...

The levelized cost of electricity (LCOE) is a metric that attempts to compare the costs of different methods of electricity generation consistently. Though LCOE is often presented as the minimum constant price at which electricity must be ...

Finally, through three allocation methods based on the independent, multivariate copula function and vine copula function and other distribution methods, the calculation and ...

Armin & Rajabi Mashhadi: A Fast Calculation Method for Analyzing the Effect of Wind Generation on ATC
329 For analyzing the effect of the uncertainties on the ATC, probabilistic approaches ...

Therefore, to evaluate the technical potential installed capacity P_{TPG} , it is necessary to calculate the effective installed capacity area and the actual installed capacity of each grid in the area, calculate the annual average ...

This paper proposes a new algorithm for DPF considering wind power integration, named DPF method considering wind power (DPF-W). The core of the proposed algorithm lies in the alternative execution of CPF ...

This model has two main advantages: (i) it provides a simple method to calculate the capacity credit accurately even when the wind power penetration is large and the wind power and load profile are not statistically ...
