

What was Cambodia's energy supply in 2021?

Cambodia's energy supply in 2021 was 9,255 GWh. Of this, 44% was from hydro, 41% from coal, 8% from fuel oil, and 6% from solar. In 2021, Cambodia had 305 MW of solar installed and seven grid-connected projects. Another 700 MW of solar was planned or under construction.

Does Cambodia have a good energy data set?

The Cambodia Energy Statistics 2019-2020 provides nationally available energy data before 2010 on coal, electricity, and biomass. The longer historical energy data set provides Cambodia with a good data set for any energy planning analysis as it is used to predict the future behaviour of energy consumption.

Who is IBV Energy Partners?

ibV Energy Partners is a leader in the development and operations of integrated solar + storage power plants across the United States. We are focused on the utility-scale segment and partner with wholesale power providers and corporate entities to address their resource planning process and long-term decarbonization goals.

How much solar energy capacity does Cambodia have?

Cambodia had 305 MW of solar installed at the end of 2021. Another 700 MW was planned or under construction. Cambodia could potentially base its energy system on 100% renewable energy, but this would require large investments, including in energy storage systems.

How much energy does Cambodia consume?

Cambodia had a total primary energy supply (TPES) of 5.48 Mtoe in 2012. The electricity consumption was 3.06 TWh. About one third of the energy came from oil products and about two thirds from biofuels and waste.

Is biomass a source of electricity in Cambodia?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Cambodia: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Chuyan Cheng is a Manager on the Power Marketing & Analytics team. Her work is focused on offtaker proposals and energy market research. Previously, Chuyan was a graduate consultant working with the DC Department of Energy and Environment, where she reviewed federal- and state-level solar policies and provided solutions to facilitate the decarbonization process.

Cambodia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen

country across ...

Cambodia's domestic energy supply in 2021 was 9,255 GWh, with 44% hydro, 41% coal, 8% fuel oil, and 6% solar. Many rural communities are making use of solar power to access electricity. Cambodia had 305 MW of solar installed at the end of 2021, with seven grid-connected projects. Another 700 MW was planned or under construction.

As the business chamber of Cambodia, IBC is a member of the Paris-based world business organization ICC (International Chamber of Commerce). The IBC became a member of the ICC as part of the IBC 2.0 initiative to link to relevant international organisations which can help us to bring and inculcate best business practices into Cambodia.
