

Can you walk on solar panels?

In short, yes. However, while walking on solar panels is possible and safe for you and the panels, it is not always recommended. To help you understand more about it, in this article, we explain how resistant solar panels are, how to walk on top of a solar panel properly, and what will happen if you do it the wrong way.

Can a solar panel installer walk on top of a module?

While some solar panel installers walk on top of modules when performing an installation, there is still a danger of glass breaking and the module getting damaged. Most installers walk skillfully and do not put pressure on the middle of the glass to avoid damaging it or the solar cells.

How do I choose a solar installer?

Choose a solar installer. An installer can help you determine whether your roof is suitable for solar panels. Begin by researching qualified, insured installers online or asking for recommendations from people who've gone solar. Comparison-shop by asking multiple installers to come assess your roof.

How do I get solar power?

Here are the steps to take to get powered by sunshine. Choose a solar installer. An installer can help you determine whether your roof is suitable for solar panels. Begin by researching qualified, insured installers online or asking for recommendations from people who've gone solar.

What happens if you walk on a solar panel?

In some cases, a power reduction from a PV system after walking on a module can mean scratched glass. Depending on how deep and extensive the scratch is, you will see a reduction in the power output of your solar panel. To fix this problem, you need to call a technician to repair the damage and change the whole glass of the module.

How do you move a solar panel?

Move slowly, as moving fast means you're pushing harder and putting down more pressure. Keep all your points of contact as close to where the panel is fixed as possible. This will put more of the stress into the panel supports than the panel itself.

Solar panels can last more than 25 years with good maintenance. But if storms and other threats to the panels are more common where you reside, it increases the chances of the tempered ...
