Can a cracked solar panel cause a fire?

Indeed, a cracked solar panel can cause a fire, even though this is uncommon. Solar panels undergo rigorous testing to ensure they can handle different situations. Yet, harm to the panel can result in hidden cracks. These tiny cracks, called microcracks, might create hotspots within the cell, and these hotspots could potentially trigger fires.

Do solar panels get damaged?

At least most of the time, cracks don't damage the solar cells themselves. These cells are among a solar panel array's most critical components. Even if a solar cell has been damaged, that doesn't compromise the entire panel. Panel performance drops in proportion to the total amount of damage.
