

Can the open-air locker be exposed to rain

What happens if air locker leaks out?

The air locker uses a lot of air pressure to lock out the differential and if the system isn't well sealed, then it can be very easy for air to leak out. If enough air leaks out and it is a big enough break in the seal then the system can become completely useless because there will be no air pressure.

What are the pros and cons of air lockers?

Air lockers are looked at as one of the most efficient lockers on the market when it comes to locking the differential of your car. With pros will always come cons. One of these cons is air leaks. The air locker uses a lot of air pressure to lock out the differential and if the system isn't well sealed, then it can be very easy for air to leak out.

What is an air locker?

Air lockers or air-operated differential lockers are devices that are designed to provide maximum drive to all wheels of a 4x4. They are the strongest locking differentials on the market. 4WD vehicles come equipped with front and rear differentials.

Are air lockers a good idea?

Air lockers are also environmentally friendly and reduce the chances of vehicle damage, as cars with Air lockers can be driven in a safer and more controlled manner. But there are some disadvantages to getting Air lockers.

Are air lockers more complicated than other lockers?

Yes, ARBs are more complicated in design than other lockers, which has led to some people fearing the Air Locker. However, no other currently available aftermarket locker allows you to change from an open differential to 100 percent locked at the push of a button.

Are air lockers good for trail-riding?

The Air locker definitely involves a complex, but really effective and reliable system. While trail-riding you might need your locker to engage instantaneously in case of any sudden situations, and that is what you get with an Air locker. The ARB Air lockers take less than a second to engage, which can be very helpful on high-risk trails.
