

Cayman Islands cooling system for solar panels

The 5MW Solar Farm is the first commercial solar project in the Cayman Islands. It was completed and commissioned in June 2017 and is located on a 20-acre site in Bodden Town, Grand Cayman. The Farm comprises 21,690 poly-crystalline photovoltaic (solar) modules each with a DC-rated capacity of 305 watts.

To maximize your solar PV system's energy output in George Town, Cayman Islands (Lat/Long 19.2886, -81.3722) throughout the year, you should tilt your panels at an angle of 17°; South for fixed panel installations.

GreenTech Solar is the exclusive dealer for SunPower products in the Cayman Islands and a Caribbean regional provider. SunPower's award winning solar panels are quite simply the finest solar products available on the market today ...

In a desert environment with 35% humidity, a 1-square-meter solar panel required 1 kilogram of gel to cool it, whereas a muggy area with 80% humidity required only 0.3 kilograms of gel per square meter of panel. The upshot in either case: The temperature of the water-cooled solar panel dropped by as much as 10°C.

Because solar panels tend to lose about .46 percent of power per degree Celsius above their standard test conditions, this will equal up to a 10-25 percent power loss to your solar panel output. To see how your own system will react to increased temperatures, you'll need to check the specifications.

Tests conducted in Lebanon showed that the PV-thermal panel can generate 4% more power than a reference panel, thanks to the cooling effect of the copper pipes. The new design also achieved an average electric efficiency of 11.5% while the PV panel without cooling reached an average efficiency of 10%.
