

The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. Renewable energy statistics 2024 provides datasets on power-generation capacity for 2014-2023, actual power generation for 2014-2022 and renewable energy balances for over 150 countries and areas for 2021-2022. ...

The World Energy Council Latin America & The Caribbean Network shapes the future of energy in the region. ... particularly in Brazil, northern Chile and southern Peru may lower the efficiency of renewable and thermal power plants. Rising temperatures will also boost ... a transition to renewable energy sources such as photovoltaic and hydraulic ...

Clean Energy Auctions in Latin America analyzes government-led long-term power auctions with participation from non-conventional renewable sources in six countries in Latin America and the Caribbean (Brazil, Chile, Mexico, Argentina, Peru, and Jamaica) since 2015. The study examines the key auction design elements in each case and analyzes the ...

Of this total installed capacity, 22,121 MW correspond to renewable energy projects, which means that 65% of the Chilean electricity matrix is now based on renewable energy. To date, 8,220 MW of renewable energy projects are under construction, representing 99% of the electricity generation projects currently under construction in Chile.

According to the International Renewable Energy Agency Report on renewables energy in Latin America 2015, apart from the renewable quota of 20 per cent by 2025, Chile is the only country in the region with a pure renewable energy ...

Note: RE = renewable energy; EE = energy efficiency The findings in this report consider targets and developments as of April 2019. The wind and solar PV capacities in the Transforming Energy Scenario in 2030 in this report are slightly higher than the estimates presented in

of energy issues including oil, gas and coal supply and demand, renewable energy technologies, electricity markets, energy efficiency, access to energy, demand side management and much more. Through its work, the IEA advocates policies that will enhance the reliability, affordability and sustainability of energy in its 31 member countries,

The company's decarbonization of its electricity supply not only reduces its environmental footprint, but very importantly, is playing a crucial role in the transformation of Chile's electricity sector by: (i) supporting the deployment of new renewable energy into the national grid; (ii) contributing to the reduction of greenhouse gas (GHG ...

Whether it is harnessing biofuels in Brazil, hydropower in Brazil, Venezuela, Mexico, Colombia, Argentina and Paraguay, or high-quality solar and wind resources in Brazil, Mexico, Chile or Argentina; producing copper or lithium in Chile, Peru and Argentina, minerals essential to clean energy technologies; or tapping the vast oil and natural gas ...

The region's existing infrastructure needs significant expansion and better-connected grids to support the development, storage, distribution, and transmission of renewable energy. Addressing these infrastructure challenges is crucial for Latin America and the Caribbean to advance in the energy transition.

The geographic mismatch between power generation and consumption is the main bottleneck for greater use of renewable energy. In particular, the areas rich in solar and wind in the northern and southern parts of Chile are more than 1,000 miles away from its economic hub in the central area.

It provides insights on the ways in which the outlook for the region and the biggest global energy trends are deeply intertwined - as well as recommendations on policies that could allow Latin America and the Caribbean to take full advantage of its great potential.

According to the International Renewable Energy Agency Report on renewables energy in Latin America 2015, apart from the renewable quota of 20 per cent by 2025, Chile is the only country in the region with a pure renewable energy certificate system.

The EU Latin America and Caribbean Investment Facility (LACIF) will provide an additional grant of EUR16.5 million. The Team Europe Renewable Hydrogen Funding Platform for Chile supports Chile's ambition to make its main sources of energy generation renewable and clean, with 100% clean energy before 2050.

The geographic mismatch between power generation and consumption is the main bottleneck for greater use of renewable energy. In particular, the areas rich in solar and wind in the northern and southern parts ...

Whether it is harnessing biofuels in Brazil, hydropower in Brazil, Venezuela, Mexico, Colombia, Argentina and Paraguay, or high-quality solar and wind resources in Brazil, Mexico, Chile or ...
