

What happened to Cuba's power plants?

A new, widespread power outage has plunged Cuba into darkness after one of the island's major power plants failed. Catch up on the developing stories from around the globe making headlines.

How does Cuba get its power?

Cuba gets its power from large thermoelectric plants like Antonio Guiteras and some smaller ones, which run on crude oil. While the island produces about half of its own crude oil, it must import the remainder, which can be difficult -- and costly -- due to U.S. sanctions.

How many people have seen power restored in Cuba?

The local electric company said more than 260,000 clients had seen power restored. It was the latest in a string of countrywide blackouts of Cuba's antiquated and increasingly frail power generation system. This year, Cuba's grid fell into near-total disarray, stressed by fuel shortages, natural disaster and economic crisis.

Is Cuba working on a solar energy project?

Cuba has been working on a project to upgrade the island's electrical grid through the use of alternative power sources. The construction of 31 centers to generate solar energy is under way and expected to be completed next year.

Why is there a power outage in Cuba?

Cuba's power grid has been plagued by frequent outages in recent months, with more than half of the country experiencing power cuts during peak hours. The outages are primarily caused by fuel shortages and aging infrastructure. In many parts of the island, electricity is crucial for cooking and water pumping.

Does Cuba need a solar power system?

It has historically relied on allies like Venezuela and Russia for cheaper fuel supplies. Cuba has been working on a project to upgrade the island's electrical grid through the use of alternative power sources. The construction of 31 centers to generate solar energy is under way and expected to be completed next year.
