

How many MW are there in Slovak solar power?

While the so-called solar boom was not as intensive as in some other Member States, for instance, in Czechia, the Slovak electricity market still experienced a rise of installed PV capacity by over 300 MW in a single year. 573 MW. The past development of solar PV capacities is illustrated in Graph 2 provided below.

Will NECP be able to harvest Slovakia's solar potential?

The current Slovakia's NECP projects a solar PV target of 1,200 MW cumulatively installed in 2030. While the NECP does not specify the character of these capacities, it is to be assumed that both ground-mounted and rooftop PV will play a role in harvesting Slovakia's solar potential.

What is Slovakia's geothermal potential?

Slovakia's overall (probable) geothermal potential is calculated at around 6,200 MWt. The development of geothermal power is mainly hindered by very high costs required for both the exploratory digs and the actual construction of the geothermal pumps. Moreover, strict criteria associated with the EIA process increase the investment risk.

Slovak Solar s.r.o. is a leading photovoltaic wholesaler in Slovakia, Czech Republic and Austria, with a vision to create a sustainable energy future. We started our journey in 2009 with a simple idea - to give companies specialising in solar installation access to premium photovoltaic products, all from one place. Since then, we have grown ...
