

How can the Dominican Republic integrate solar and wind resources?

The short-term variability and geographic diversity of the wind resource will need to be studied before implementation of projects. The Dominican Republic has created a framework for integrating solar and wind resources in its grid that can drive renewable energy adoption for years to come.

What is the first solar-plus-storage project in the Dominican Republic?

Construction has started on the first major solar-plus-storage project in the Dominican Republic, which features a 24.8MW/99MWh battery energy storage system (BESS). The Comisión Nacional De Energía (CNE) of the Dominican Republic announced the start of work on the Dominicana Azul solar project shortly in late December (22 December).

Is solar energy a viable resource for the Dominican Republic?

High solar potential, along with integrating efficiencies and economies of scale, can make solar energy a viable resource for the Dominican Republic. Similarly, wind energy has strong potential, particularly in the southwest.

Does the Dominican Republic have electricity?

Like many island nations, the Dominican Republic is highly dependent on imported fossil fuels, leaving it vulnerable to global oil price fluctuations that directly impact the cost of electricity. Before 1997, the electricity market in the Dominican Republic was regulated and state-owned.

How much does energy cost in the Dominican Republic?

This profile provides a snapshot of the energy landscape of the Dominican Republic, a Caribbean nation that shares the island of Hispaniola with Haiti to the west. In 2014, the Dominican Republic's utility rates were approximately \$0.19 per kilowatt-hour (kWh), 1 below the regional average of \$0.33/kWh.

What are the issues affecting the energy sector in the Dominican Republic?

The issues of grid capacity and storage, in particular, are curbing expansion at normative and technological level. The Dominican Government continues to expand renewable energy, electromobility and energy storage technologies and is reducing emissions of greenhouse gases.

The Dominican Republic has a total installed capacity of 3,635 MW with peak demand of 1,800 MW.⁸ Renewable energy generation in the Dominican Republic makes up 14% of total electricity (nearly all of which is provided by hydro-electric facilities), while the remaining 85% of electricity is generated from imported fossil fuels.⁸ Despite recent ...

A pilot project is making it possible to provide electricity for a community in a rural location with a micro grid. Public participation (community energy) and collaboration with cooperatives are ...

Minister Santos Echavarría highlighted the country's goal of meeting 25% of its national energy demand with renewable sources by 2025, positioning the Dominican Republic as a leader in clean energy adoption. Given the country's strategic location and abundant solar resources, this bold vision is inspiring and achievable.

It is pursuing an active policy to deploy renewable energies, with the objective to reach 30% penetration of renewable energies in the grid by 2030. Akuo is present in Dominican Republic since 2017 and holds a strong position in the ...

Residents in the mountain village of Sabana Real near the Dominican Republic-Haiti border hope that electrification through a solar microgrid will help the town address population flight, economic challenges ...

In partnership with the Dominican Ministry of Energy and Mines (MEM), the Superintendence of Electricity (SIE), and the National Energy Commission (CNE), the GIZ-implemented Proyecto Transición Energética and TAPSEC now present an updated set of recommendations for revised transmission grid codes.

Residents in the mountain village of Sabana Real near the Dominican Republic-Haiti border hope that electrification through a solar microgrid will help the town address population flight, economic challenges and worries about ...
