

What is EcoStruxure microgrid operation?

Once the microgrid goes live,our EcoStruxure Microgrid Operation (EMO) on-site management software runs day-to-day operations and EcoStruxure Microgrid Advisor (EMA),a cloud-based,AI-powered analytics platform,enhances EMO's capabilities by providing forecasts based on data from the microgrid and other sources.

What is EcoStruxure microgrid flex?

Microgrids must be standardized,repeatable,and quick to configure for each use case to grow adoption and impact for enterprises,buildings,and facilities of all sizes. EcoStruxure Microgrid Flex is the first standardized solution for building and operating commercial and industrial microgrids.

What is EcoStruxure microgrid advisor?

EcoStruxure Microgrid Advisor enables you to dynamically control on-site energy resources and loads to optimize your facility's performance. The software seamlessly connects to your distributed energy resources to automatically forecast and optimize how and when to consume, produce, and store energy.

What is a microgrid energy control center?

In addition,the Energy Control Center,a pre-engineered power control center,manages energy sources to optimize resources and maximize performance. So,for example,if a weather forecast predicts a potentially disruptive storm,EMA can order the microgrid to charge up an onsite battery energy storage system (BESS).

Could a microgrid help reduce energy costs?

A microgrid permanently connected to the utility grid,comprising solar panels and a BESS,could reduce an enterprise's energy costs. One that also included a fuel-cell generator could be "island-able" or capable of operating off the grid when necessary,further increasing resiliency.

How does a microgrid configuration tool work?

With those inputs,the configuration tool automatically generates a programmable logic controller (PLC) program for the planned microgrid,which can be uploaded to the microgrid controller onsite or given to a panel builder or manufacturer that will assemble the grid.

EcoStruxure Microgrid Operation-Medium Sites (EMO-M) is the microgrid power control system at the Edge level. EMO-M software has an optional local HMI allowing remote monitoring and control of DERs and loads.

This solution leverages advanced optimization algorithms and predictive analytics to intelligently orchestrate the operation of DERs, ensuring efficient utilization and maximizing economic benefits while minimizing operational costs. Virtual Power Plant (VPP):

Our microgrid controller helps to extend sustainability, resiliency and cost optimization to small and medium businesses. As a leader in energy management technologies you can entrust Schneider Electric to deliver an innovative solution that will help you to conduct your business without any limits. EcoStruxure Microgrid Build

A high-performance, resilient, and scalable solution combining advanced power control and management with a simple system structure based on a microgrid controller or a microgrid SCADA/local HMI.

EcoStruxure(TM) Microgrid Operation (EMO) is a Power Management System (PMS), in charge of the islanding management of the microgrid. EcoStruxure(TM) Microgrid Operation (EMO) is responsible for the real-time optimization of DER in islanded mode. It is composed of a local controller with specific algorithms and a human machine interface (HMI ...
