

How is energy used in Ecuador?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

How has Ecuador's energy consumption changed over the years?

Ecuador's energy production increased by a compounded growth rate of 0.5% per year from 2011 to 2021, and renewables accounted for most of the increase. The country's energy consumption also increased by a compounded growth rate of 0.5% per year over the same period, down from 4.9% per year the decade prior.

Does Ecuador have a natural gas market?

Ecuador's natural gas market is less developed than its oil sector; it has a 0.9% share of total energy production and 1.7% share of energy consumption (Figure 1). Natural gas in Ecuador is mostly used by the industry sector¹.

How much energy does Ecuador produce in 2022?

In 2022, Ecuador's generation capacity was 8,864 MW, of which 5,425 MW (61 percent) corresponded to renewable energy and 3,438 MW (39 percent) to non-renewable energy sources (fossil fuels derived from oil and natural gas).

How much natural gas does Ecuador have?

Ecuador had 385 billion cubic feet (Bcf) of proven natural gas reserves as of 2022. Ecuador's natural gas reserves account for about 0.14% of South America's total reserves. Ecuador's natural gas production is small compared with oil production, accounting for less than 1% of total energy production in the country in 2021.

Who uses natural gas in Ecuador?

Natural gas in Ecuador is mostly used by the industry sector¹. Hydropower in Ecuador is a significant source of electricity generation given the country's geographical features, such as the Andes Mountains and the Amazon rainforest. Hydropower accounted for 79.1% of total electricity generation in 2021, up from 55.4% in 2011.² Figure 1.

These aspects, together with the novel energy policies launched by the government both in electricity, oil, and mining issues, suggest a promising energy scenario for 2022 and the next four years. This favorable energy scenario is based on the design of a more robust Investor Environment that allows ensuring the Ecuadorian Economic

Ecuador Energy. See also: Ecuador Electricity. Energy Consumption in Ecuador. Ecuador consumed 714,684,386,000 BTU (0.71 quadrillion BTU) of energy in 2017. This represents 0.12% of global energy consumption. Ecuador produced 1,367,962,212,000 BTU (1.37 quadrillion BTU) of energy, covering 191% of

its annual energy consumption needs.

Ecuador provides business opportunities for electric generation given the current electricity crisis and rising demand. Additionally, the country plans to reach self-sufficiency through clean production and potentially export energy to neighboring countries.

established the target of 6% renewable energy installed capacity (other than large hydro) by 2013. The regulatory framework for electricity is the Electric Law of 2015, which explicitly states the objective of promoting renewable energy sources, including solid-waste biomass. This law establishes that the Ministry of Electricity

Energy Balance: total and per energy. Ecuador Energy Prices: In addition to the analysis provided on the report we also provided a data set which includes historical details on the Ecuador energy prices for the follow items: price of premium gasoline (taxes incl.), price of diesel (taxes incl.), price of electricity in industry (taxes incl ...

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Ecuador: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen

country across all of the key metrics on this topic.
