

The existing TBG pipeline exports LNG to the wider LNG market in Brazil. The terminal includes all the necessary infrastructure to receive, store, regasify, and export natural gas. It receives gas via the methane carriers which is then transferred to Energos Winter FSRU via a ship-by-ship system.

The first LNG terminal in the south of the country, strategically located to serve growing industrial and power demand, Santa Catarina is expected to provide natural gas to the energy-constrained region.
