

How much electricity does the Solomon Islands produce?

The Solomon Islands produce a total of 103 m kWh of electric energy per year. Per capita, this is an average of 135 kWh. The country can completely be self-sufficient with domestically produced energy, as their total production meets 108 percent of their own requirements.

How to reduce energy consumption in Solomon Islands?

Air conditioning in government offices and business houses is a significant contributor to energy consumption in Solomon Islands. Proper maintenance and the introduction of more efficient air conditioners with controls that allow the system to shut down when not needed are ways to reduce energy consumption in this area.

Why is the energy supply of Solomon Islands inefficient?

The energy supply in Solomon Islands is inefficient due to inefficient generation, transmission, and end-use technology such as air conditioning systems, lighting, industrial machinery, and negligence.

What is the power generation capacity of Solomon Islands?

The power generating capacity of the Solomon Islands is currently 10.2 MW, which is equal to its peak load capacity. One mining company in the Solomon Islands generates its own electricity with a power capacity of 11 MW and a peak load of 8 - 9 MW.

What is metered electricity in Solomon Islands?

In the context of Solomon Islands, metered electricity is a strategy introduced by the Solomon Islands Electricity Authority (SIEA) to reinforce the cash value of electricity and promote efficient usage techniques.

Why do Solomon Islands rely on marine and fisheries resources?

Huge populations of Solomon Islands reside along low lying coastal areas and therefore heavily rely on marine and fisheries resources. Climatic factors such as sea level rise, rainfall, strong winds, storm frequency, salinity, unusual tides, salinity and groundwater level could affect the productivity of marine and fisheries resources.
