

Unlike Li-ion batteries, EnerVenue solutions do not need to be placed in regularly serviceable areas like attics or basements; Their groundbreaking safety achievements pave the way for storage integration in existing homes as well as new building scenarios; They can be installed out of sight and mind, since no maintenance is needed

EnerVenue's metal-hydrogen batteries offer a lower-cost, zero-maintenance alternative to lithium-ion batteries without concern for thermal runaway or propagation, eliminating the need for auxiliary fire suppression solutions.

EnerVenue, a US-based manufacturer of metal-hydrogen batteries capable of cycling up to three times per day, at two to 12-hour discharge rates, is launching of the EnerVenue Energy Rack....

In May of 2023, EnerVenue's metal-hydrogen battery obtained UL1973 certification and completed UL9540A tests. The UL1973 certification test is a safety standard for batteries used in stationary applications, light electric rail (LER), and vehicle auxiliary power.

"The newest version of EnerVenue's batteries extends the solutions" durability, operational flexibility, and cost-efficiency benefits for stationary storage projects across myriad use cases ...

FREMONT, Calif. - Dec. 6, 2022 - EnerVenue, the first company to bring metal-hydrogen batteries capable of more than 30,000 cycles to the clean energy revolution, today announced ...

Startup Enervenue has already got 5GWh of customer orders for its metal-hydrogen battery for stationary storage, with a 25GWh opportunity pipeline in North America alone. The company is rapidly commercialising its batteries, which are based on a technology used in space applications like on the International Space Station and the Hubble telescope.

"EnerVenue's metal-hydrogen technology is uniquely differentiated from typical li-ion systems. It's ultra-long life, fire safety, and flexibility change the narrative around what's ...

EnerVenue has launched the second-generation of its metal-hydrogen battery: Energy Storage Vessels (ESVs). Customers can cycle ESVs up to three times per day without rest, and the batteries have an expected lifetime of 30 years/30,000 cycles. ESVs will continue to deliver 86% capacity beyond 30,000 cycles, providing a second asset life.
