

What to do with solar energy in Estonia?

We have prepared an exciting tour - go on a ride on the wind turbine nacelle or take a walk at the solar park, the annual electricity output of which is equivalent to the average annual consumption of 300 Estonian homes. We produce renewable solar energy in Estonia and Poland. We own 38 solar parks with a total capacity of 30 MW.

How many solar panels are installed at Estonia dairy farm?

We built a solar power plant on the roof of Estonia Dairy Farm in Järva County, where we installed 644 solar panels. Over the years, we have vigorously expanded our solar energy production. The parks are located in 38 locations. More than 100 000 solar panels in total are located in our solar parks. The parks are located in 38 locations.

Will Estonia be fully solar powered by 2030?

Estonia has seen a significant increase in its solar power capacity in 2022, becoming one of the leaders in solar power per capita among EU members. With growing investments and innovative startups, it now aims to be fully green-powered by 2030.

How many MW of solar power are there in Estonia?

Since 2020 we have completed development and construction of more than 62 MW of solar capacity. We have more than 744 MW of ongoing projects around Estonia in different municipalities which will be completed by the end of 2024. We are also working to incorporate storage systems to provide electricity when the sun is not shining.

Why do solar parks generate the most electricity in Estonia?

In Estonia, solar parks usually generate the most electricity in May, as the days are quite long and the temperature is lower than in June-July. Lower temperatures help increase efficiency. It is also possible to generate energy in cloudy weather, because solar radiation reaches the solar panels through the clouds as well.

How much solar power does Estonia have in 2022?

That makes another record-breaking year for solar on the continent, with a total of 10 GW more capacity added than expected. Regarding solar power per capita, Estonia has emerged as one of the new leaders. The country is ranked 6th among 27 EU members, with 596 Watt per capita in 2022, jumping from 405 in 2021.

Enefit Green made an investment decision to start building a solar park in the industrial area of the Estonia Mine in Ida-Virumaa. The solar park with a capacity of nearly 3 megawatts is the first in Estonia to be located on a ...

We entered the solar power market in 2017, establishing a solar power station on the roof of the Estonia dairy

farm in J&#228;rvamaa, where we installed 644 solar panels. We currently produce solar energy in Estonia and Poland, where we ...

Enefit Green made an investment decision to start building a solar park in the industrial area of the Estonia Mine in Ida-Virumaa. The solar park with a capacity of nearly 3 megawatts is the first in Estonia to be located on a platform built from waste rock.

Estonia had nearly no significant solar capacity in 2020. However, as of 2024, Estonia ranked sixth in the European Union in terms of solar panel capacity per capita. Such rapid development is part of a larger national effort toward a transition to renewable energy.

Our wind and solar energy parks are the perfect solution for those who want to make a positive impact on the environment. With our state-of-the-art solar farm construction technology and environmentally friendly methods, we're leading the way in the fight against climate change.

Solar is one of the most sustainable and accessible energy sources. Since 2020 we have completed development and construction of more than 62MW of solar capacity. We have more than 744MW of ongoing projects around Estonia in different municipalities which will be completed by the end of 2024.

Enefit Green is currently building five wind and three solar parks in Estonia, Lithuania, Poland and Finland, with a total capacity of 608 megawatts. The total volume of these investments is more than 780 million euros.

Our wind and solar energy parks are the perfect solution for those who want to make a positive impact on the environment. With our state-of-the-art solar farm construction technology and environmentally friendly methods, we're leading ...

Estonia has seen a significant increase in its solar power capacity in 2022, becoming one of the leaders in solar power per capita among EU members. With growing investments and innovative startups, it now aims to be fully green-powered by 2030.

We focus on providing comprehensive solar solutions across residential, commercial, and utility sectors. Driven by the goal of a sustainable future, we're dedicated to delivering efficient and reliable solar power systems that pave the way for cleaner energy consumption.

We entered the solar power market in 2017, establishing a solar power station on the roof of the Estonia dairy farm in J&#228;rvamaa, where we installed 644 solar panels. We currently produce solar energy in Estonia and Poland, where we have a total of 43 solar parks.
