

Will Guyana's new gas project help reduce energy costs?

The project, expected to help lower electricity costs and reduce emissions once completed next year, will be the first to take advantage of associated gas produced in the country. Guyana has so far invested some \$400 million in the development.

What is the 'gas-to-energy' project in Guyana?

The 'Gas-to-Energy' project by Guyana's government aims to feed a 300-megawatts power plant and a natural gas liquids (NGL) facility with gas produced at two Floating Production Storage and Offloading (FPSO) facilities that are part of Exxon's Stabroek block.

Which recommendations are applicable for Guyana's gas to power project?

The following recommendations are therefore applicable for Guyana's gas to power project. Adequate grid infrastructure, policy, and legislative changes are required to ensure that all Guyanese benefit entirely from the gas to power project.

Will a gas to power project improve social services in Guyana?

A gas to power project is expected to improve the availability and quality of social services in many communities. Based on current population growth rates, Guyana's per capita GDP is projected to exceed US\$16,900 by 2030, enabling the country to reach close to high-income status.

Could a gas-to-power project improve Guyana's Electricity Reliability?

Guyana's plan to improve the reliability of its electricity and lower the cost of electricity through a gas-to-power project could be a critical pillar that ensures that the benefits of natural resource exploitation are broad-based this time around. The gas-to-power project has two phases:

What is the future of energy in Guyana?

The development of alternative renewable energies, such as solar, wind, hydropower, and biomass technologies, remains a key priority for the future growth of the energy sector in Guyana. Government of Guyana has committed to reducing the cost of electricity by at least 50% over the next five years (Budget 2022).
