

Are lithium-ion batteries safe to store?

Lithium-ion battery fires can even reignite after being contained. In this post, we'll talk through the safe storage requirements for lithium-ion batteries that manage the risks to keep people and facilities safe. The UK doesn't have specific regulations or legislation for the general storage of lithium-ion batteries.

How to store lithium ion batteries?

Storing lithium-ion batteries in airtight containers can provide an extra layer of protection against moisture and humidity. Plastic storage bins with a tight-sealing lid or specialized battery cases are excellent options. Ensure the containers are clean and dry before placing the batteries inside. 3. Avoid Condensation

Can you store lithium ion batteries in the UK?

The UK doesn't have specific regulations or legislation for the general storage of lithium-ion batteries. The Health and Safety Executive has, however, published guidance on good practices for handling and storing batteries, even though it is not compulsory. Regulations are not prescriptive but instead follow the typical routes:

Can lithium ion batteries be stored in a refrigerator?

While storing lithium-ion batteries in a refrigerator may help to keep them cool, it is generally not recommended. The moisture and condensation inside the refrigerator can potentially damage the batteries and compromise their safety and performance. It is best to store them in a cool, dry place outside of the refrigerator.

What is the ideal charge level for storing lithium batteries?

The ideal charge level for storing lithium batteries is around 40-50% of their capacity. Storing a lithium-ion battery at full charge puts stress on its components, potentially leading to a faster loss of capacity over time. Conversely, allowing a battery to discharge completely before storage can cause irreversible damage.

Are lithium-ion batteries a fire risk?

Due to the potential fire risk associated with lithium-ion batteries, businesses should have appropriate fire safety measures in place. This may include fire extinguishers or suppression systems, proper ventilation, and clear storage area signage. Even when stored correctly, lithium-ion batteries can experience degradation over time.

For lithium metal batteries the lithium metal content must not exceed 2 g and for lithium ion batteries the Watt-hour rating must not exceed 100Wh. Devices in checked baggage must be completely switched off and must be protected from damage.
