

Finland is undergoing a major energy transition. Moving away from imported fossil fuels and towards local, clean energy production will create the basis for new industrial investment. In addition to wind power, we also need plenty of solar energy, for ...

Finland ranks 59th in the world for cumulative solar PV capacity, with 404 total MW's of solar PV installed. This means that 0.30% of Finland's total energy as a country comes from solar PV (that's 41st in the world).

Solar panels in Helsinki. Solar energy in Finland is used primarily for water heating and by the use of photovoltaics to generate electricity. As a northern country, summer days are long and winter days are short. Above the Arctic Circle, the sun does not rise some days in winter, and does not set some days in the summer. Due to the low sun ...

Explore the solar photovoltaic (PV) potential across 38 locations in Finland, from Ivalo to Karis. We have utilized empirical solar and meteorological data obtained from NASA's POWER API to determine solar PV potential and identify the ...

The Finnish Energy Authority states that in 2022, solar power production amounted to nearly 635 megawatts - more than a 240 megawatt increase compared to the previous year. Finland still produces fairly little solar electricity compared to leading European countries. The Netherlands, in contrast, produce over seven times more per capita.

Solar Finland and its subsidiaries with strong long-term background are experts in all aspects of solar energy. Our extensive know-how and experience of over 40 years make it possible to develop in different areas making our products and ...

Solar energy in Finland is used primarily for water heating and by the use of photovoltaics to generate electricity. As a northern country, summer days are long and winter days are short. Above the Arctic Circle, the sun does not rise some days in winter, and does not set some days in the summer. Due to the low sun angle, it is more common to place solar panels on the south side of buildi...

The top monocrystalline solar panel manufacturers in Finland include Savo-Solar Oyj, Valoe Corporation and Naps Solar Systems. When other solar companies have come and gone, these brands continue to excel while providing top-rated panels.

Solar Finland and its subsidiaries with strong long-term background are experts in all aspects of solar energy. Our extensive know-how and experience of over 40 years make it possible to develop in different areas making our products and services competitive in the solar energy markets both domestically and abroad.

Explore the solar photovoltaic (PV) potential across 38 locations in Finland, from Ivalo to Karis. We have utilized empirical solar and meteorological data obtained from NASA's POWER API to determine solar PV potential and identify the optimal panel tilt angles for these locations.

Solar power generation forecasts are based on weather forecasts, estimation of the total installed solar panel capacity and the estimated locations of the panels in Finland. Fingrid has estimated the installed capacity by using installation statistics published annually by Finnish Energy Authority's that it receives from the distribution system ...
