

What fuels can a 250 kW fuel cell run on?

The 250 kW fuel cell will be capable of running on a wide range of fuels including natural gas, renewable biogas, or hydrogen. Have questions? Speak to one of our product specialists. FuelCell Energy's team is here to support you every step of the way.

Can fuel cells extend the life of a fuel cell?

Fuel cells are a source of clean energy that can be used in conjunction with other renewable energy sources or on their own. Through the collaboration, IBM will research ways that FuelCell Energy can extend the life of its fuel cells through an optimal control of operational parameters and their cost effectiveness for customers.

Can a solid oxide fuel cell system run on different fuels?

The system's ability to run on various fuels provides flexibility in the event of fuel price fluctuations. Solid oxide fuel cell (SOFC) systems will be capable of running as an electrolyzer for hydrogen production or as a fuel cell for electricity production.

What is a solid oxide fuel cell (SOFC) system?

Solid oxide fuel cell (SOFC) systems will be capable of running as an electrolyzer for hydrogen production or as a fuel cell for electricity production. The 250 kW fuel cell will be capable of running on a wide range of fuels including natural gas, renewable biogas, or hydrogen. Have questions? Speak to one of our product specialists.

SFC Energy AG is a leading provider of hydrogen and direct methanol fuel cells for stationary, portable and mobile hybrid power solutions. With the Clean Energy and Clean Power Management business segments, SFC Energy is ...

Everyone's journey to net-zero is unique, but is it possible to produce scalable clean energy from many different sources? With our platform, the answer is yes. We help organizations around the world reimagine their specific energy needs ...

Complete waste to energy solutions. FuelCell Energy offers proven, end-to-end solutions for wastewater treatment plants. Our unique technology treats the anaerobic digester gas so that the fuel cell plant can run directly off of it. As a result, the system efficiently produces renewable energy from direct biogas.

The company today has fuel cell projects that run on natural gas and renewable biogas. The company's products can produce hydrogen in addition to power and thermal attributes. Additionally, the company has capabilities for fuel cell-based carbon capture, long-duration energy storage and solid-oxide based electrolysis.

At FuelCell Energy, we're helping deliver a more sustainable future by decarbonizing power and producing hydrogen around the world. Our platforms can help businesses and communities ...

Everyone's journey to net-zero is unique, but is it possible to produce scalable clean energy from many different sources? With our platform, the answer is yes. We help organizations around the world reimagine their specific energy needs while staying true to their sustainability commitments.

FuelCell Energy's platforms can be configured as a building's primary power source, making them an ideal solution for decentralized data centers looking for reliable energy. Fuel cells generate electricity and heat through an electrochemical reaction, contributing to ultra-clean baseload power and providing a backup solution.

We design, manufacture, undertake project development, install, operate and maintain megawatt-scale fuel cell systems, serving utilities, industrial and large municipal power users with solutions that include both utility-scale and on-site power generation, carbon capture, local hydrogen production for transportation and industry, and long ...

FuelCell Energy Inc. is joining hands with E.ON SE unit E.ON Business Solutions to offer customers across Europe financial solutions ranging from power purchase agreements, capital leases and attractive purchase options. "With E.ON, FuelCell has a partner who understands both the value and environmental benefits of our solution, is excited about ...

The emergence of eFuels, driven by FuelCell Energy's initiatives, marks a promising step towards more sustainable and efficient energy solutions. By leveraging cutting-edge technologies, FuelCell Energy is paving the way for a future where businesses globally can reduce their carbon footprint while ensuring economic growth.

We recognize that the planet needs resilient, cost-effective, and accessible clean energy solutions to complement intermittent renewable energy resources. Until now, the widespread use of hydrogen fuel cells has been challenging due to ...

The emergence of eFuels, driven by FuelCell Energy's initiatives, marks a promising step towards more sustainable and efficient energy solutions. By leveraging cutting-edge technologies, FuelCell Energy is paving ...

Start here to check out use cases for fuel cell electricity production. ... FuelCell Energy delivers efficient, affordable, and clean solutions to enable a world empowered by clean energy. For Investors. Financial Information; Stock Information; FAQs; Contact Investor Relations;

FuelCell Energy (NASDAQ: FCEL) delivers efficient, affordable and clean solutions for the supply, recovery and storage of energy. We design, manufacture, undertake project development, install, operate and maintain

megawatt-scale fuel cell systems, serving utilities, industrial and large municipal power users with solutions that include both utility-scale ...

At FuelCell Energy, we're helping deliver a more sustainable future by decarbonizing power and producing hydrogen around the world. Our platforms can help businesses and communities with power generation, carbon capture, hydrogen production, and energy storage.

Through the collaboration, IBM will research ways that FuelCell Energy can extend the life of its fuel cells through an optimal control of operational parameters and their ...
