Red light's primary benefit is that it stimulates increased cellular energy production. When the energy centers of cells (mitochondria) absorb light photons, they are stimulated to produce more of a compound known as adenosine triphosphate (ATP), which is the primary fuel for all cellular functions and metabolic processes.

Red light therapy devices vary widely in cost, style, quality, and effectiveness. In this article, we compare the best qualities of some of the top red light therapy panels on the market to help set them apart.

Bouvet Island, located in the remote South Atlantic Ocean, is home to a fascinating and enigmatic volcano that has piqued the interest of scientists and adventurers alike. This uninhabited island, located approximately 1,600 kilometers southwest of the coast of South Africa, is of significant geological importance due to its volcanic activity ...

Bouvet Island is known as the most remote island in the world; Antarctica, over 1600 kilometers (994 miles) to the south, is the nearest land mass. Located near the junction between the South American, African, and Antarctic tectonic plates, the island is mostly formed from a shield volcano--a broad, gently sloping cone formed by thin, fluid lavas& #8212;that is ...
