

Does the UK have a green energy strategy?

UK renewable energy statistics indicate that as little as 20 years ago, green energy was a relatively insignificant part of the UK's industrial strategy. Today, things are more efficient with over 40% of the UK's energy now coming from renewable sources.

How has green energy impacted the UK economy?

UK renewable energy statistics show that the embrace of green energy has helped strengthen the economy, by creating close to 75,000 new jobs between 2015 and 2022. In 2015, 200,500 people were employed in jobs producing renewable energy. This figure steadily grew, rising 8.6% by 2018.

How much green energy does the UK produce in 2022?

In 2022, the UK generated 325,257 GWh of renewable energy. The UK's leading source of green energy for this year was gas, which produced almost two-fifths (38%) of the UK's total energy production for 2022.

How will green technologies impact the UK's economy?

These green technologies will use the wealth of Britain's natural resources to deliver cleaner, cheaper power, and create thousands of new high-skilled jobs in new industries across the UK. Business & Energy Secretary Kwasi Kwarteng said:

The United Kingdom has been an early player in the energy transition, being among the first countries to set a net zero target by 2050 and to put in place carbon budgets. UK emissions have already fallen by around 50% since 1990, indicating a strong start.

The United Kingdom is also an historically important oil and gas producer, which has underpinned domestic energy security and supported strong economic activity and quality jobs. Offshore oil ...
