

How can Guinea achieve universal energy access?

National Determined Contribution (2015) for carbon abatement, issued for COP21 in Paris. Energy Access: There is not a precise objective to reach universal access, but in 2017 Guinea raised funds with development partners to double its electrification rate in 5 years (from 18% to 36%).

Does Guinea produce electricity?

Guinea has sharply increased its electricity production capacity, with the gradual establishment of independent electricity producers from the middle to the end of the 2010's, which culminated with the commissioning of Souapiti in 2020. Guinea's installed capacity is dominated by hydroelectric and fossil fuel plants.

Does Guinea have hydroelectric power?

It is locally produced, while Guinea imports all the petroleum products it needs. The potential for hydroelectric power generation is high, but largely untapped. Electricity is not available to a high percentage of Guineans, especially in rural areas, and service is intermittent, even in the capital city of Conakry.

What are the challenges facing Guinea's power sector?

The power sector in Guinea is going through a few challenges that the GoG is committed to tackle. One overarching issue remains the perceived country risk, mostly due to the widespread riots driven by political and social reasons that affected the country in recent years.

Can Guinea become an electricity exporter?

Souapiti (450 MW) started operations in late 2020 and the GoG signed the contracts for the Amaria dam (300 MW) and the Khoumaguéli solar park (40 MW), that sum up to 790 MW already. If Guinea wants to electrify its mining sector and become an electricity exporter, additional MW need to be developed and the cost per kWh be minimized.

What is the least-cost modality for increasing access to electricity in Guinea?

The result of the modelisation is that in Guinea, given the (theoretical) low cost of supply (hydro and solar) and the multiple interconnection and transmission projects, the least-cost modality for increasing the access is rate is grid extension (which was indicated as optimal for >90% of the consumption centres).

Revised in November 2021, this map provides a detailed overview of the power sector in Guinea alongside an inset showing West African Power Pool (WAPP) priority transmission project across West Africa.

virtual breakdown of the electricity supply system; (b) the weakness and inefficiency of the national power company, Soci t  Nationale d'Electricit  (SNE); and (c) low electricity prices, ...

Despite strong resource potential and long-term opportunities to export low-cost electricity throughout West

Africa, Guinea's power sector faces significant challenges including dilapidated infrastructure, high technical and commercial ...

OverviewConsumption and accessBiomassElectricityOilRenewable energySee alsoExternal links Three primary energy sources make up the energy mix in Guinea: fossil biomass, oil and hydropower. Biomass (firewood and charcoal) makes the largest contribution in primary energy consumption. It is locally produced, while Guinea imports all the petroleum products it needs. The potential for hydroelectric power generation is high, but largely untapped. Electricity is not available to a high percentage of Guineans, especially in rural areas, and service is intermittent, even in the capita...
