

Is Ghana a good place to get electricity?

Thanks to strong government leadership since the 1990s, Ghana had an electricity access rate of 84% in 2018, one of the highest in sub-Saharan Africa. To reach the remaining population, grid densification (58% of the new connections) and stand-alone systems (27%) are the two main least-cost solutions in both scenarios. IEA. Licence: CC BY 4.0

How much energy is needed in Ghana?

Around \$70 billion of cumulative energy supply investment is needed in the STEPS, 60% of which is for upstream oil and gas. Investment ramps up by nearly 45% in the AC, with a strong emphasis on renewables and electricity networks. Thanks to notable efforts on electrification, the goal of full access is within grasp in Ghana.

Should Ghana stop reliance on imports?

Taking action to arrest (and reverse) declining oil output would reduce Ghana's reliance on imports to meet its growing future demand while a renewed push on developing domestic natural gas resources would help Ghana meet its accelerating industrial power needs.

Why is Ghana a small producer of oil & gas?

Ghana remains a relatively minor producer of oil and gas in Africa. Gas demand grows strongly in the AC, lowering oil use in the power and industry sectors; this increases the need for imports of gas. billion dollars (2018) IEA. Licence: CC BY 4.0
