

How to choose qualified photovoltaic panels

Are portable solar panels better than off-grid solar panels?

Off-grid solar panels can harness enough power to supply energy for your entire home, while portable solar panels are better for on-the-go solar power usage. Large rooftop solar panels are much more expensive than small solar panels -- they can take decades to completely pay off -- and can only be installed by professionals.

Should you add solar panels to your roof?

The solar industry was shaken up over the last year, and it might have you confused. The Inflation Reduction Act, providing a 30% tax credit for the cost of solar panel system installations, along with falling solar panel prices and rising electricity costs, makes the case for adding solar panels to your roof.

Should I ask for a reference for my solar installation?

For example, if you're installing a ground mounted solar panel installation, ask for a reference on a ground mounted install they've done. Or, if you want to see an installation in person, asking for a reference located close by. It's also never a bad idea to ask for a reference for an installation that's now a few years old.

Should I talk to a solar installer?

"It's important you talk to an expert, and that you understand that this is essentially an open heart surgery for your house," said John Wagner, head of sales at Custom Solar Solutions, an installer based in Atlanta. Ultimately, you'll have questions unique to your property and your project.

Are solar panels durable?

Most solar panels are very durable, but if you live in an area that has heavy snow or high wind, you should also be sure that the panels you install are designed to withstand the conditions in your area. Look for panels that meet the IEC 61215, a reliability standard established by the International Electrotechnical Commission (IEC).

Panasonic. Best for roofs with tight spaces. Panasonic is most commonly known in the U.S. as a TV and small appliance manufacturer, but the Japanese company is also a global leader in solar panels. In 2021, Panasonic ...
