

How to increase the light absorption of photovoltaic panels

Can plasmonics improve the absorption of light in solar cells?

Recently, plasmonics has been used to trap the light at nanoscale to improve the absorption in solar cells. In this study, we construct a silicon thin-film solar cell (TFSC) using finite-difference time-domain (FDTD) simulation.

How to improve solar cell efficiency based on light-trapping mechanism?

Therefore, to increase the overall efficiency, solar cell efficiency must be improved in terms of optical (light) absorption and electrical current generation [5 - 7, 19]. To improve the absorption based on light-trapping mechanism, several schemes [4 - 7, 20] have been proposed.

How to improve solar cell efficiency?

The main problem of poor efficiency is due to very low absorption of Si at longer wavelength. Therefore, to increase the overall efficiency, solar cell efficiency must be improved in terms of optical (light) absorption and electrical current generation [5 - 7, 19].

Can light trapping improve a solar cell's open circuit voltage?

Light trapping has conventionally been viewed as a way to enhance the short-circuit current of a solar cell by enhancing the photocarrier generation rate. As light-trapping strategies are becoming increasingly effective, ever thinner cells are considered where light management can also positively impact the open circuit voltage V_{oc} .

How do you calculate solar absorption?

The absorption can be calculated from electric field intensity and imaginary part of permittivity. Both parameters can be measured in an FDTD simulation. An electron-hole pair generation can be determined at any location inside the solar cell at any wavelength of light.

Can Nanodome solar cells improve light absorption?

Enhanced light absorption can also be confirmed by much improved PV performance of nanodome solar cell. Fig. 9 b shows the I - V characteristic of a nanodome solar cell showing V_{oc} of 0.75 V, J_{sc} of 17.5 mA cm^{-2} with a FF of 0.45 and efficiency of 5.9% .
