

How to install photovoltaic panels in horizontal and vertical mixed installation

Should a solar panel be installed horizontal or vertical?

However, it is more efficient to have a consecutive block of solar panels installed using the same orientation--either vertical or horizontal. If there is a break in your roof, or you have room for one more solar panel, then your solar contractor can install the solar panel to fit the space.

Can solar panels be installed vertically on a roof?

The size of solar panels makes them well suited to be installed vertically on most roofs. Of course, not every home--or roof--is designed the same. Depending on the climate, your roof's construction, and your solar energy needs, horizontal solar panel installation may be the right choice for your home.

Are solar panels horizontal or vertical?

You've probably seen some solar systems where the panels are installed in vertical orientation, and others in a horizontal orientation. This might leave you wondering, why are they different and does it matter if solar panels are horizontal or vertical? The orientation of your solar panels doesn't affect the production of your system.

Are horizontal solar panels a good choice for your home?

Depending on the climate, your roof's construction, and your solar energy needs, horizontal solar panel installation may be the right choice for your home. The amount of direct sunlight could impact the direction in which your solar panels are installed.

How are solar panels installed on a roof?

Solar panels are mounted to the rafters on your roof using "rails." Since panels are not as wide as they are tall, it takes fewer rails to install the panels in a vertical orientation than in a horizontal orientation. Less railing means less overall cost!

Do horizontal solar panels need more railings?

It's important to note that horizontal solar panels require about twice as many railings and mountings to be installed. However, the benefits of having more efficient solar panels outweigh the cost of using twice as many railings to install the solar panels.
