How do I Mount my solar panels?

Depending on various factors, your solar panel mounting process might differ slightly. For this guide, we use the EcoFlow Tilt Mount Bracket for EcoFlow 400W Rigid Solar Panel as an example. Make sure to consult your equipment manuals before proceeding to install your panels.

How do I install rigid solar panels on my roof?

EcoFlow's rigid solar panels come with a EcoFlow Tilt Mount Bracket for easy rooftop installation. The components include four fixing brackets, two adjustable brackets, and screws. This should be all you need to mount rigid solar panels on the roof or any other flat surface on your home that receives direct sunlight.

How to install a solar panel?

The first step is to attach the fixing bracket to the solar panel. Lay the solar panel face-down on the tarp or canvas to protect the photovoltaic surface. You want to be sure the mounting holes on the back of the panel align with the holes in the fixing bracket. Don't modify the module frame because doing so may void your manufacturer's warranty.

Can solar panels be mounted on a flat roof?

For solar panels on a flat roof, mounting systems are slightly different and can include a triangle 'ballast' box to support the panels. For solar thermal panels (with cells that use the sun's heat to warm water in a house) things are a little different.

How do you attach solar panels to a roof?

To attach a solar PV system, you first use rails and mounts made of aluminum. Then, the system is secured to the roof by penetrating the roofing material and securing the system feet using lag bolts. The bolts are sunk into the rafters.

Do solar panels need mounts?

Solar panel mounts are a common component of almost every solar panel array. Although there are newer solar panel technologies coming out that do not require mounts, such as the Lumeta solar module that are being developed, the majority of solar panel arrays on the market and the ones already installed will require this feature.
