

# How to turn off the solar power lamp on time

Do solar lights turn on and off automatically?

Solar lights have an on/off switch, so you can manually turn them on and off when needed. Solar lights turn on and off automatically with the help of a light sensor, but you might be in a case where you need to turn it on during the day or turn it off during the night if you are traveling for a long period.

When should a solar light switch be turned off?

Only when you're not going to be using your solar lights for a while or packing them away for a trip should you flip the switch to the "off" position. The on/off switch should be left in the "on" position for optimal solar lighting performance and consistent light.

Do solar lights have a manual on/off switch?

Nowadays, most solar lights also have an outer manual on/off switch that allows the light to function at all. It's important to check your solar lights or any solar lights you look into purchasing as some of them may not have that outer manual on/off switch.

Why are my solar lights turning on and off?

Sensor Issues: Solar lights know when to turn on based on the light levels -- they should glow up as it gets dark and turn off when it gets light. If they start acting up, turning on at the wrong times, or not at all, this suggests a sensor problem. Resetting the lights can recalibrate their sensors and restore normal operation.
